Index for Volume 38

This annual index is organized by first author and by title. Page numbers refer to the following issues:

Number 1 (January): 1–80, Number 2 (March): 81–160, Number 3 (May): 161–248,
Number 4 (July): 249–328, Number 5 (September): 329–408, Number 6 (November): 409–488

Author Index

Ashford, D., Bennett, S. J., & Davids, K., *Observational modeling effects for movement dynamics and movement outcome measures across differing task constraints: A meta-analysis*, 185–205.

Atkins, S. G., & Miller, J. O., *Numerosity and rhythmicity in stimulus–response compatibility*, 478–484.

Bennett, S., Ashford, D., Rioja, N., Coull, J., & Elliott, D., *Integration of intermittent visual samples over time and between the eyes*, 439–450.

Bernier, P.-M., Chua, R., Franks, I. M., & Khan, M. A., *Determinants of offline processing of visual information for the control of reaching movements*, 331–338.

Binsted, G., Rolheiser, T. M., & Chua, R., *Decay in visuomotor representations during manual aiming*, 82–87.

Bronner, S., & Ojofeitimi, S., *Gender and limb differences in healthy elite dancers: Passé kinematics*, 71–80.

Brown, N. A. T., & Jensen, J. L., *The role of segmental mass and moment of inertia in dynamic-contact task construction*, 313–326.

Buchanan J. J., & Ryu, Y. U., *One-to-one and polyrhythmic temporal coordination in bimanual circle tracing*, 164–184.

Calmels, C., Holmes, P., Lopez, E., & Naman, V., *Chronometric comparison of actual and imaged complex movement patterns*, 339–348.

de Rugy, A., Riek, S., & Carson, R. G., *Neuromuscular-skeletal origins of predominant patterns of coordination in a rhythmic two-joint arm movement*, 7–14.

Doan, J., Whishaw, I. Q., Pellis, S. M., Suchowersky, O., & Brown, L. A., *Motor deficits in parkinsonian reaching: Dopa-sensitivity influenced by real-world task constraint*, 45–59.

Earhart, G. M., *Walking and running on the circular treadmill: Transition speed and podokinetic aftereffects*, 349–356.

Faugloire, E., Bardy, B. G., & Stoffregen, T. A., *Dynamics of learning new postural patterns: Influence on preexisting spontaneous behaviors*, 299–312.

Gabbard, C., Ammar, D., & Lee, S., *Perceived reachability in single- and multiple-degree-of-freedom workspaces*, 423–429.

Galna, B., & Sparrow, W. A., *Learning to minimize energy costs and mechanical work in a bimanual coordination task*, 411–422.

Hayes, S. J., Hodges, N. J., Scott, M. A., Horn, R. R., & Williams, A. M., *Scaling a motor skill through observation and practice*, 357–366.

Heuer, H., *Simultaneous specification of amplitudes and directions of bimanual reversal movements*, 285–298.

Heuer, H., & Klein, W., *Intermanual interactions related to movement amplitudes and endpoint locations*, 126–138.

Holt, K. G., Saltzman, E., Ho, C.-L., Kubo, M., & Ulrich, B. D., *Discovery of the pendulum and spring dynamics in the early stages of walking*, 206–218.

Hong, S. L., & Newell, K. M., *Change in the organization of degrees of freedom with learning*, 88–100.

Issartel, J., Marin, L., Gaillot, P., Bardainne, T., & Cadopi, M., *A practical guide to time–frequency analysis in the study of human motor behavior: The contribution of wavelet transform*, 139–160.

Ivry, R. B., Mayr, U., Corcos, D. M., & Posner, M. I., *Psychological processes and neural mechanisms for action: The legacy of Steven W. Keele*, 3–6.

Ketcham, C. J., Dounskaia, N. V., & Stelmach, G. E., *The role of vision in the control of continuous multijoint movements*, 29–44.

Kinsella-Shaw, J. M., Harrison, S. J., Colon-Semenza, C., & Turvey, M. T., *Effects of visual environment on quiet standing by young and old adults*, 251–264.

Kubo M., & Ulrich, B. D., *Early stage of walking: Development of control in mediolateral and anteroposterior directions*, 229–237.

Lai, S.-C., Mayer-Kress, G., & Newell, K. M., *Information entropy and the variability of space–time movement error*, 451–466.

Liu, W., Forrester, L., & Whitall, J., *A note on time–frequency analysis of finger tapping*, 18–28.

Looper, J., Wu, J., Angulo Barroso, R., Ulrich, D., & Ulrich, B. D., *Changes in step variability of new walkers with typical development and with Down syndrome*, 367–372.

Loucks, T. M. J., & De Nil, L. F., *Oral kinesthetic deficit in adults who stutter: A target-accuracy study*, 238–246.

Lyons, J., Glazebrook, C. M., Keetch, K. M., Dhillon, V. P., & Elliott, D., *Influence of endogenous and exogenous orientations of attention on inhibition of return in a cross-modal target–target aiming task*, 219–228.

Maslovat, D., Chua, R., Lee, T. D., & Franks, I. M., *Anchoring strategies for learning a bimanual coordination pattern*, 101–117.

Moe-Nilssen, R., Helbostad, J. L., Åkra, T., Birkedal, L., & Nygaard, H. A., *Modulation of gait during visual adaptation to dark*, 118–125.

Panzer, S., Wilde, H., & Shea, C. H., *Learning of similar complex movement sequences: proactive and retroactive effects on learning*, 60–70.

Pratt, J., Dodd, M., & Welsh, T., *Growing older does not always mean moving slower: Examining aging and the saccadic motor system*, 373–382.

Proctor, R. W., Vu, K.-P. L., & Pick, D. F., *A deficit in older adults' effortful selection of cued responses*, 265–284.

Rohr, L. E., *Gender-specific movement strategies using a computer-pointing task*, 431–437.

Rohr, L. E., *Upper and lower limb reciprocal tapping: Evidence for gender biases*, 15–17.

Teixeira, L. A., Chua, R., Nagelkerke, P., & Franks, I. M., *Reprogramming of interceptive actions: Time course of temporal corrections for unexpected target velocity change*, 467–477.

Tseng, Y., Scholz, J. P., & Valere, M., *Effects of movement frequency and joint kinetics on the joint coordination underlying bimanual circle drawing*, 383–404.

Title Index

A deficit in older adults' effortful selection of cued responses, *Proctor, R. W., Vu, K.-P. L., & Pick, D. F.*, 265–284.

Anchoring strategies for learning a bimanual coordination pattern, *Maslovat, D., Chua, R., Lee, T. D., & Franks, I. M.*, 101–117.

A note on time–frequency analysis of finger tapping, *Liu, W., Forrester, L., & Whitall, J.*, 18–28.

A practical guide to time–frequency analysis in the study of human motor behavior: The contribution of wavelet transform, *Issartel, J., Marin, L., Gaillot, P., Bardainne, T., & Cadopi, M.*, 139–160.

Change in the organization of degrees of freedom with learning, *Hong, S. L., & Newell, K. M.*, 88–100.

Changes in step variability of new walkers with typical development and with Down syndrome, *Looper, J., Wu, J., Angulo Barroso, R., Ulrich, D., & Ulrich, B. D.*, 367–372.

Chronometric comparison of actual and imaged complex movement patterns, *Calmels, C., Holmes, P., Lopez, E., & Naman, V.*, 339–348.

Decay in visuomotor representations during manual aiming, *Binsted, G., Rolheiser, T. M., & Chua, R.*, 82–87.

Determinants of offline processing of visual information for the control of reaching movements, *Bernier, P.-M., Chua, R., Franks, I. M., & Khan, M. A.*, 331–338.

Discovery of the pendulum and spring dynamics in the early stages of walking, *Holt, K. G., Saltzman, E., Ho, C.-L., Kubo, M., & Ulrich, B. D.*, 206–218.

Dynamics of learning new postural patterns: Influence on preexisting spontaneous behaviors, *Faugloire, E., Bardy, B. G., & Stoffregen, T. A.*, 299–312.

Early stage of walking: Development of control in mediolateral and anteroposterior directions, *Kubo M., & Ulrich, B. D.*, 229–237.

Effects of movement frequency and joint kinetics on the joint coordination underlying bimanual circle drawing, *Tseng, Y., Scholz, J. P., & Valere, M.*, 383–404.

Effects of visual environment on quiet standing by young and old adults, *Kinsella-Shaw, J. M., Harrison, S. J., Colon-Semenza, C., & Turvey*, M. T., 251–264.

Gender and limb differences in healthy elite dancers: Passé kinematics, *Bronner, S., & Ojofeitimi, S.*, 71–80.

Gender-specific movement strategies using a computer-pointing task, *Rohr, L. E.*, 431–437.

Growing older does not always mean moving slower: Examining aging and the saccadic motor system, *Pratt, J., Dodd, M., & Welsh, T.*, 373–382.

Influence of endogenous and exogenous orientations of attention on inhibition of return in a cross-modal target–target aiming task, *Lyons, J., Glazebrook, C. M., Keetch, K. M., Dhillon, V. P., & Elliott, D.*, 219–228.

Information entropy and the variability of space–time error, *Lai, S. C., Mayer-Kress, G., & Newell, K. M.*, 451–466.

Integration of intermittent visual samples over time and between the eyes, *Bennett, S., Ashford, D., Rioja, N., Coull, J., & Elliott, D.*, 439–450.

Intermanual interactions related to movement amplitudes and endpoint locations, *Heuer, H., & Klein, W.*, 126–138.

Learning of similar complex movement sequences: proactive and retroactive effects on learning, *Panzer, S., Wilde, H., & Shea, C. H.*, 60–70.

Learning to minimize energy costs and mechanical work in a bimanual coordination task, *Galna, B., & Sparrow, W. A.*, 411–422.

Modulation of gait during visual adaptation to dark, *Moe-Nilssen, R., Helbostad, J. L., Åkra, T., Birkedal, L., & Nygaard, H. A.*, 118–125.

Motor deficits in parkinsonian reaching: Dopa-sensitivity influenced by real-world task constraint, *Doan, J., Whishaw, I. Q., Pellis, S. M., Suchowersky, O., & Brown, L. A.*, 45–59.

Neuromuscular-skeletal origins of predominant patterns of coordination in a rhythmic two-joint arm movement, *de Rugy, A., Riek, S., & Carson, R. G.*, 7–14.

Numerosity and rhythmicity in stimulus–response compatibility, *Atkins, S. G., & Miller, J. O.*, 478–484.

Observational modeling effects for movement dynamics and movement outcome measures across differing task constraints: A meta-analysis, *Ashford, D., Bennett, S. J., & Davids, K.*, 185–205.

One-to-one and polyrhythmic temporal coordination in bimanual circle tracing, *Buchanan J. J., & Ryu, Y. U.*, 164–184.

Oral kinesthetic deficit in adults who stutter: A target-accuracy study, *Loucks, T. M. J., & De Nil, L. F.*, 238–246.

Perceived reachability in single- and multiple-degree-of-freedom workspaces, *Gabbard, C., Ammar, D., & Lee, S.*, 423–429.

Psychological processes and neural mechanisms for action: The legacy of Steven W. Keele, *Ivry, R. B., Mayr, U., Corcos, D. M., & Posner, M. I.*, 3–6.

Reprogramming of interceptive actions: Time course of temporal corrections for unexpected target velocity change, *Teixeira, L. A., Chua, R., Nagelkerke, P., & Franks, I. M.*, 467–477.

The role of segmental mass and moment of inertia in dynamic-contact task construction, *Brown, N. A. T., & Jensen, J. L.*, 313–326.

The role of vision in the control of continuous multijoint movements, *Ketcham, C. J., Dounskaia, N. V., & Stelmach, G. E.*, 29–44.

Scaling a motor skill through observation and practice, *Hayes, S. J., Hodges, N. J., Scott, M. A., Horn, R. R., & Williams, A. M.*, 357–366.

Simultaneous specification of amplitudes and directions of bimanual reversal movements, *Heuer, H.*, 285–298.

Upper and lower limb reciprocal tapping: Evidence for gender biases, *Rohr, L. E.*, 15–17.

Walking and running on the circular treadmill: Transition speed and podokinetic aftereffects, *Earhart, G. M.*, 349–356.
